DUCKLINGS NEED GOOD ATTENTION

Remove to Brooder After 24 to 36 Hours Old and Give Them First Feed.

COMFORT IS BIG ESSENTIAL

Hot-Water Pipe Systems Have Been Used Successfully for Brooding-Style of Brooder House Depends on System Used.

(Prepared by the United States Departhours after hatching, remove them to oaks, hickories, butternut, or any oththe brooder and give them their first feed. The brooder should be operated at a temperature of about 95 degrees Fahrenheit at first and gradually reduced to 80 or 85 degrees within a week or 10 days, say poultry specialists of the United States Department of Agriculture. The temperature may be reduced quite rapidly, depending on the season of the year. Keep the ducklings comfortable. When uncomfortable they will crowd together and try to get nearer the heat, but if comfortable they will spread out under the hover

Confine Ducklings at First. The ducklings should be confined around the hover at first until they have learned to return to the source of the heat. In the winter green ducklings usually require heat until they are marketed, but later in the season artificial heat may be removed after two to four weeks. Cool brooder houses without any heat, or with only a few hot-water pipes on the rear walls of the building, are used early in the spring for the ducklings after they are 4 to 6 weeks old. the hot-water pipes.

Use Individual Brooders. ing from 25 to 100 ducklings, and coal, gasoline or distillate oil-stove brooders with a covering them lightly. with a capacity varying from 200 to In following this plan there are sev-
